

IN THE CLAIMS:

Please amend claims 3, 10, 15, 17, 20, and 21 as follows:

1. (previously amended) A process for providing a security document, in particular a banknote, with a coloured marking, comprising providing a photosensitive preparation on a portion of said document and submitting at least selected areas of said portion to a light beam, wherein said preparation is capable of forming a film on said portion and comprises a substance capable of producing colloidal metal or semiconducting particles under the effect of UV irradiation, and wherein said areas are irradiated by means of an UV-light beam so as to produce said colloidal particles.

2. (original) A process as claimed in claim 1, wherein said preparation is an ink or varnish, is substantially transparent before said irradiation and comprises a film forming polymer and a precursor of colloidal metal or semiconducting particles.

3. (currently amended) A process as claimed in claim 2, wherein said precursor is a precursor of Au, Ag or ~~Cu colloidal particles~~ Cu colloidal particles.

4. (previously amended) A process as claimed in claim 1, wherein said film forming polymer is a polysaccharide or polypeptide and said precursor is an inorganic gold salt or acid.

5. (original) A process as claimed in claim 4, wherein said film forming polymer is chitosan and said precursor is a chloroauric acid.

6. (previously amended) A process as claimed in claim 1, and further comprising the steps of

- a) applying a chitosan solution onto said portion of said security paper and
- b) drying said portion, so as to form a film having a thickness of between 0.5 and 20 μm
- c) applying a solution of chloroauric acid to said portion, and
- d) drying said portion in the dark

7. (previously amended) A process as claimed in claim 1, and further comprising the steps of

- a') combining a chitosan solution and a chloroauric acid solution in a molar ratio HAuCl_4 / chitosan monomeric unit of between 0.1 and 1
- b') applying said combined solution onto said portion of said security paper and
- c') drying said portion in the dark
- d') eventually repeating steps b' and c' so as to form a film having a thickness of between 0.5 and 20 μm , in particular of between 2 and 10 μm .

8. (previously amended) A process as claimed in claim 1, wherein said irradiation is performed by means of a pulsed excimer laser.

9. (previously amended) A process as claimed in claim 1, wherein said irradiation is performed by means of a frequency-multiplied solid state Laser.

10. (currently amended) A process as claimed in claim 1, wherein the irradiation is performed by a beam deflection method ~~via a plurality of mirrors~~ via a plurality of mirrors.

11. (original) A process as claimed in claim 10, wherein said irradiation is performed via a system of a beam scanning system, in particular piloted galvanometric mirrors.

12. (previously amended) A process as claimed in claim 1, wherein a diffractive network is reported into said film.

13. (previously amended) A process as claimed in claim 1, wherein a covering layer is applied onto said film after said irradiation, said covering layer having a high absorption in the UV range and being substantially transparent in the visible light region.

14. (previously amended) A process as claimed in claim 1, and further comprising a reticulating step after development of said marking.

15. (currently amended) A process as claimed in ~~any one of claims 10-14~~ claim 10, providing an identity marking to said security document.

16. (previously amended) A security document, in particular a banknote, bearing a marking obtained by a process as claimed in claim 1.

17. (currently amended) A security document, in particular a banknote, bearing an identity marking obtained by a process as claimed in ~~any one of claims 1-15~~ claim 1, wherein the amount of photosensitive preparation per surface unit provided to said document is smaller than the amount that is necessary to produce a metallic mirror aspect.

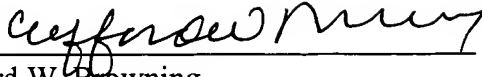

18. (previously presented) A process as claimed in claim 11, providing an identity marking to said security document.

19. (previously presented) A process as claimed in claim 12, providing an identity marking to said security document.

20. (currently amended) A process as claimed in claim 13, providing an ~~identify~~ identity marking to said security document.

21. (currently amended) A process as claimed in claim 14, providing an ~~identify~~ identity marking to said security document.

Respectfully submitted,

By:
